## Today's challenges:

- Complexity of multiple networks, vendors, technologies and hardware
- Ongoing Capital & Operational expenditures
- Inconsistent security makes compliance difficult
- Multiple hardware devices invite many points of failure
- Installations & modifications are time consuming & tough to coordinate
- Resource requirements to manage and operate

## The Verizon Managed SD WAN solution uses Software Defined Networking (SDN)

A software defined network allows flexibility and dynamic assignment of bandwidth and other resources to meet application needs

- Seamlessly connect multiple technologies
- Transport and Vendor Agnostic
- Application performance built into the network
- Ability to manage the application, not the device
- Control site level application delivery on LTE and wireline
- Rapid implementation
- SDN and related technologies can help organizations use their network to meet business demands like boosting growth and performance or improving customer experiences.
- NFV - Network Functions Virtualization

## The Managed SD WAN Quick Start Program makes it easy to meet today's challenges – and plan for the future. Highlights include:

- Up to 15 hours of Professional Services - at no charge
- Aggressive CPE Discounts - teamed with best in class CPE providers
- 10 CPE Max
- 90 day satisfaction guarantee
- 1, 2, or 3 year contract terms
- 1 per Customer, US only

Make your net *work.*
